### **DETAILED ACTION**

In view of the Appeal Brief filed on 25 June 2002, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 19-20 are rejected under 35 U.S.C. 102(e) as being anticipated by US 5,876,842 (hereafter Duffy).

Duffy discloses, referring to figures 1A-E, a printed circuit card comprising a metal layer (10) sandwiched between a pair of dielectric layers (14), said dielectric layers each being formed of a photoimaged cured dielectric material (see col. 5, lines 20-40), metalization (16) on each of said first and second layers forming circuitry on said first and second layers of said photoimageable material, and metal filled vias (15, see col. 5, lines 60-65) in at least said first layer of photoimageable material connected to said circuitry and to said metal layer (not shown, but described, see col. 5, lines 60-68) and an opening in said metal layer and in said first and second layers of photoimageable material, said opening being metallized to connect at least a portion of the circuitry on said second layer without contacting said metal layer [claim 19], wherein said holes and vias in said dielectric material are photoformed (see col. 6, lines 1-25) [claim 20].

### ***Response to Arguments***

Applicant's arguments with respect to claims 19 and 20 have been considered but are moot in view of the new ground(s) of rejection.
